Introduction

This project is an Android-based information kiosk application developed to guide users during **Esemka Food Festival Events**. The application provides an interactive interface that shows the location of all participating tenants to help visitors navigate the venue more easily.

Contents

This session package includes the following materials:

1. **Session Instructions (PDF)**: Detailed instructions outlining the tasks to be completed and deliverables expected for this session.
2. **Resources Folder**: This folder contains additional resources assets that can be used throughout the development of the application.
3. **MSSQL Database Schema (SQL)**: A MSSQL script containing the structure for the tables used in this session.
4. **MYSQL Database Schema (SQL):** A MYSQL script containing the structure for the tables used in this session.

Description of Project and Tasks

Technical Considerations:

1. **Database Interaction**: Use the database schema provided.
2. **API Development**: Implement a RESTful API.
3. **Data Validation**: Ensure user input is correct and complete.
4. **User Interface**: Develop intuitive screens based on the requirements, ensuring the provided user interface design is followed without significant modifications.
5. **Error Handling**: Display clear messages to the user if there are any problems.

Additional Considerations:

1. The application should work smoothly and quickly on provided mobile device.
2. Use clear labels and instructions for all UI elements.
3. Organize information in a way that is easy for users to understand.

Instructions to the Competitor

1. Navigation Screen

Figure 1. Navigation Screen

- **Figure 1** represents the main interface of the application.
- A dropdown menu is provided to allow users to switch between events. Only ongoing events and those scheduled to start within the next two weeks will be displayed. Events are listed in ascending order by name.
- When a user selects an event, the application updates the venue map accordingly. By default, the first event in the list is automatically selected.
- The map can be panned horizontally, allowing users to move left or right to explore areas that do not fit within the screen.
- Each event is linked to a venue map, and the available spots may differ depending on the event.
- The spot icons and their positions will also change based on the selected event. Spots should be layered to reflect their relative position, so elements closer to the viewer are displayed on top.

2. Spot Detail Screen

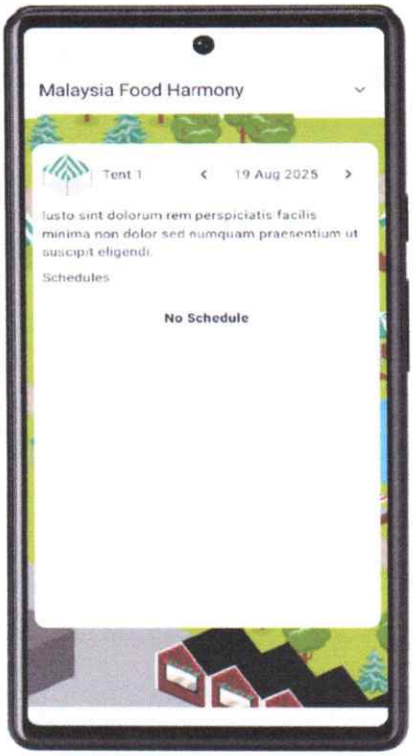

Figure 2. Spot Detail Screen (No Schedule)

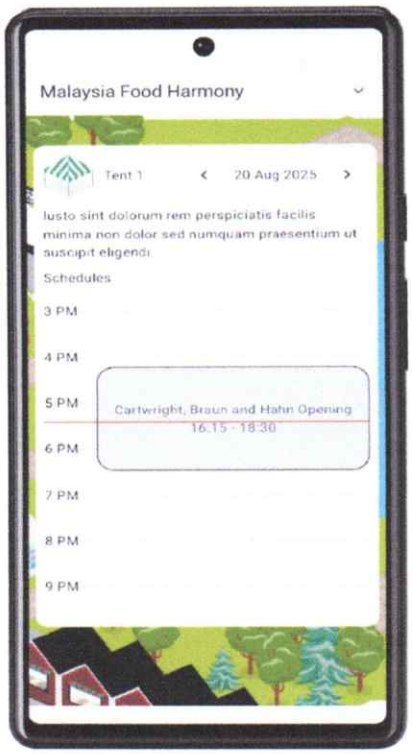

Figure 3. Spot Detail Screen (With Schedule)

- When a use taps on a spot, a dialog is displayed in the centre of the screen (see **Figure 2** and **Figure 3)**. User can close this dialog by clicking outside the dialog or pressing back button.
- The page presents the spot name, image, and description.
- Some spots, such as Toilet, Chair, Stage, and Information Tent, are never meant to be scheduled. When clicked, they should not show any schedule, and the date selector should be hidden.
- The selected date depends on the event's status. If the event is scheduled for the future, the start date is automatically selected. If the event is already in progress, the current date is selected. Users can navigate left and right to choose a date within the event's start and end dates.

Singapore (CE)	Malaysia (DCE)	Brunei Darussalam (E)	Cambodia (E)	Indonesia (E)
Singapore (E)	**Philippines (E)**	**Philippines (E)**	**Indonesia (E)**	**Thailand (JC)**

- If no activities are scheduled for the selected date, an information message is shown (see **Figure 2**).
- If schedules exist, they are displayed on a timeline divided into one-hour intervals (see **Figure 3**). The activity must be displayed inside a rounded rectangular box with a subtle background color to make it stand out. The schedule title and duration should be centered inside the box and positioned according to the scheduled time on the timeline. The border color must be distinct from the hour marker color to ensure easy distinction. Overlapping schedules will not occur, guaranteeing a clear and organized display.
- The timeline updates in real time, with a red line indicating the current time and shifting along the timeline every one minute. The red line is displayed only for the current date.
