Sa TESDA, KayangKaya

Introduction

Third party input data is a system for scan text from qr code or barcode by using smartphone(android) and send to the current course in computer.

Project designer have to develop mobile app (using android studio) to scan text existed in qr code to barcode. After getting the text from qr code/barcode, mobile app has to send a result to any plat form on window.

By using this application, users can easily input data into their search box or something else instead of direct putting from keyboard that make their sale/workflow more faster.

Contents

In session, documents and files listed are needed to used:

- Images (design layout)
- Qr code image are used to scan
- Html file is use to test a result scan from mobile device

Description of Task

While developing test project, please make sure that we create one project in android studio and one more project in eclipse IDE. We will use mobile device act as qr code/barcode reader and java act as data sender when get data from mobile device.

Technical consideration

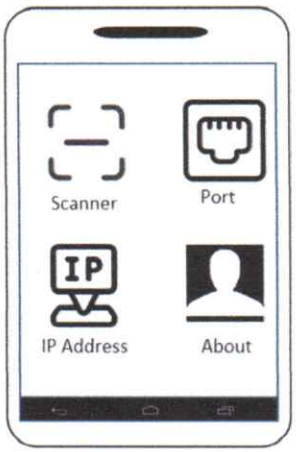
- Mobile Side:
  - Create interface: for user interact with data and configuration the connection between mobile side and java side.
  - Data processing: send a result to Java side via IP address and port number.
  - Upload qr code image to the emulator for back scanning.

Singapore (CE)	Malaysia (DCE)	Brunei Darussalam (E)	Cambodia (E)	Indonesia (E)
Singapore (E)	**Philippines (E)**	**Philippines (E)**	**Indonesia (E)**	**Thailand (JC)**

- API Side:
  - Waiting a connection from mobile side.
  - Get data from mobile and send to the current courser.

Mobile Side

Create and design layout as below:



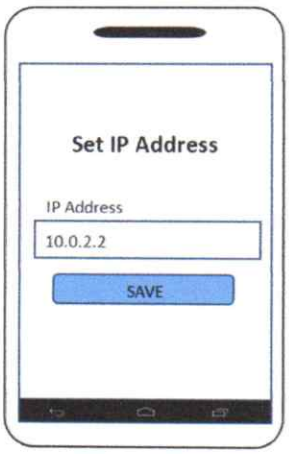
Create a layout as image above

1. Scanner is used for scanning qr code/barcode.
2. Port is used to set which port we will send a result to.
3. Ip address is used to set which machine connect with mobile.
4. About is for showing exam description.

Singapore (CE)	Malaysia (DCE)	Brunei Darussalam (E)	Cambodia (E)	Indonesia (E)
Singapore (E)	**Philippines (E)**	**Philippines (E)**	**Indonesia (E)**	**Thailand (JC)**

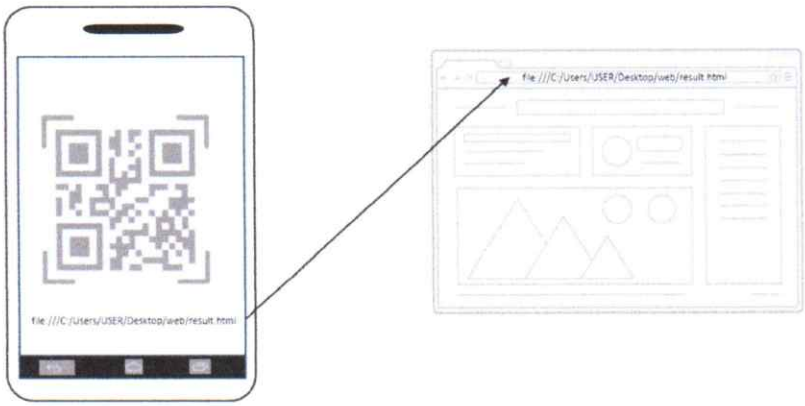
1. **Setting port number**
   Set a port number to 2025 for sending result to that port. 2025 port number is already opened in java side.

2. **Setting IP Address**
   Set an IP Address to connect and send a result from scanning to a java side(eclipse). Set your IP address to the default IP address(10.0.2.2 or localhost) via mobile side.



Singapore (CE)	Malaysia (DCE)	Brunei Darussalam (E)	Cambodia (E)	Indonesia (E)
Singapore (E)	**Philippines (E)**	**Philippines (E)**	**Indonesia (E)**	**Thailand (JC)**

3. Scanning qr code/barcode



- Create a java code (with port number is 2025) for waiting a connection to get a result from mobile.
- Scan a provided qr code image and send to java via IP address and port set above.
- Java send a result from mobile to a current cursor (web browser) with a delay time 3000milli seconds

4. About

About is just show a short description of competition date. Design as below:

Singapore (CE)	Malaysia (DCE)	Brunei Darussalam (E)	Cambodia (E)	Indonesia (E)
Singapore (E)	**Philippines (E)**	**Philippines (E)**	**Indonesia (E)**	**Thailand (JC)**
